WESTERN TENNESSEE A&M
TECHNOLOGY APPRENTICESHIP PROGRAM

THIS IS A 12 WEEK TRAINING PROGRAM

TECHNOLOGY APPRENTICESHIP

As technology becomes vital tools in businesses and homes, so does the number of technicians needing repair/service. Technology Technicians run diagnostic programs and use special testing equipment to find out why a computer is not working. But perhaps even more importantly, they listen closely to how customers describe problems with their computers and related equipment. And they help customers learn how to use their machines properly.
